

Treck IGMP

product information

Product Overview

IGMP (Internet Group Management Protocol) facilitates sending and receiving multicast messages.

Unlike broadcast messages, multicast messages are sent to a group of machines that have joined the multicast group (even across routers).

The IGMP allows machines to join and leave various multicast groups that are managed by a router.

Features

- IGMPv1 and IGMPv2 support.
- Full multicast support
- Specifically designed for embedded systems.
- Uses standard BSD sockets calls.
- High quality.
- Delivered in fully commented source code form.
- Royalty free.
