

Treck TFTP

product information

Product Overview

The Treck Trivial File Transfer Protocol is designed to be a lightweight file transfer mechanism. It only requires UDP/IP so it can be used on systems with very limited storage space. Typically, it is used on an embedded system to download new code for a flash.

Included Protocols

- TFTP

Product features

- Does not require a file system, but can work with one.
- Both client and server
- Easy to use API
- High quality, fully commented source code
